## Topics

The ISMCR 2026, will explore advances in measurement, sensing and intelligent systems for robotics, with emphasis on autonomous systems and human-robot interaction. Continuing the tradition of previous editions, the symposium provides an international forum for the exchange of recent research results, applications and emerging trends in robotics and related technologies, fully reflecting the interdisciplinary scope of IMEKO TC17.

This edition highlights innovations connecting robotics, metrology, sensing, control, computation and simulation, addressing real-world applications such as smart mobility, industrial automation, healthcare, environmental monitoring and other domains where accurate measurement and intelligent autonomy play a central role.

The central theme of ISMCR 2026 is:

**“Intelligent Robotics, Sensors and Autonomous Systems for Real-World Applications.”**

We are looking for original, high-quality contributions addressing (but not limited to) the following topics: Robot design innovations and mechanisms; sensors, smart sensors, multimodal sensing, sensor fusion, measurement reliability, calibration requirements and traceability in industrial robotic applications; advanced control systems, actuators and embedded platforms; artificial intelligence and machine learning in robotics; mobile, service, humanoid and autonomous robots; human-robot interaction, interfaces and ergonomics; telerobotics, telepresence and remote operation; cybersecurity, safety and resilience in connected and autonomous robotic systems; augmented, mixed and virtual reality (AR/VR/MR) for robotics and simulation; motion tracking,

perception systems and multisensory feedback; digital modelling, simulation platforms and Digital Twins; medical, surgical and rehabilitation robotics; industrial automation, smart manufacturing and logistics; environmental monitoring, precision agriculture and sustainability applications; aerospace, safety, risk-prevention and defence-support applications; innovative and cross-disciplinary robotics applications integrating sensing, measurement and metrology.

## Submission, presentation and publication

The official language of the symposium is English. Each paper (minimum 6 pages and maximum 20 pages) will be peer reviewed. Papers accepted by the Scientific Committee will be published by Springer in the Mechanisms and Machine Science series and indexed in Scopus, Ei Compendex and Web of Science. All submitted papers must be strictly prepared according to the publication guidelines. For detailed and up-to-date information, please visit the ISMCR 2026 symposium website.
